SUMMARY

Multidisciplinary Software Engineer combining expertise in automation, full-stack application development and backend solutions engineering. I love to work with my hands and I am eager to learn new skills and create solutions to real world problems.

EXPERIENCE

Software Engineer in Test II

February 2025–January 2026

Rocket Software / Rogers, Arkansas

- Engineered robust automated test suites for IBM DB2 administrative utilities, driving efficiency and reliability.
- Spearheaded the identification and resolution of critical issues within a bespoke, in-house Python testing and automation framework tailored for IBM z/OS and DB2 environments.
- Proactively identified edge cases in new and existing test scenarios, ensuring comprehensive test coverage and maintaining the highest standards of quality assurance.
- Partnered with cross-functional engineering teams to architect and curate large-scale datasets, powering context-aware AI solutions via Retrieval-Augmented Generation.
- Collaborated with clients to diagnose production issues via root cause analysis, engineering targeted automated tests to guarantee long-term resolution.

Software Engineer

July 2024–November 2024

Datastream Cyber Insurance / San Jose, California (Remote)

- Achieved rapid proficiency in a complex Python/React ecosystem within a 4-week timeframe to drive production enhancements.
- Drove production level enhancements to RESTful API architecture by architecting new Python FastAPI endpoints and comprehensive documentation.
- Championed code quality and long term maintainability by resolving critical bugs and executing strategic refactoring initiatives.
- Engineered modular React components to optimize development velocity, significantly reducing turnaround times through a robust focus on scalability and code reusability.

Software Engineer III

April 2023–July 2024

Insight Global/Walmart / Bentonville Arkansas

- Contributed to a software engineering team developing tools and automation solutions for Walmart's health and wellness initiatives, resulting in improved efficiency, streamlined processes, and enhanced customer experiences.
- Collaborated on the development of a certificate lifecycle automation tool utilizing Ansible, Concord, Groovy, and MySQL, resulting in a 62% reduction in processing time for 200+ certificates.
- Improved and debugged Concord and Ansible scripts used for automated setup and validation of a complex software suite, enhancing reliability and increasing successful deployments by 25%.
- Engineered intuitive, high-performance web interfaces using JavaScript and CSS to facilitate seamless user interaction and robust data validation within automated pipelines, ensuring data integrity and a frictionless user experience.

Software Engineer

April 2022–February 2023

TAGG Logistics/Hub Group / St. Louis Missouri (Remote)

- Engineered custom integrations between client e-commerce storefronts and a proprietary logistics middleware, automating warehouse order fulfillment.
- Reduced development environment setup time by 98% (from 4 hours to 5 minutes) by implementing Docker-Compose, increasing productivity for a 7-person team and accelerating feature delivery.
- Partnered closely with fellow software on boarding to design, develop, and maintain custom logistics integrations using Python, Django, and PostgreSQL, ensuring seamless on boarding for new clients and ongoing improvement of existing systems within an Agile framework.
- Automated complex maintenance and management tasks within the code base and AWS with Ansible and Terraform, resulting in a 20% increase in operational efficiency and a 50% reduction in manual intervention.

Full Stack Application Developer

July 2021–April 2022

Simmons Foods Inc. / Siloam Springs Arkansas

- Successfully delivered 3 full-stack Django Python applications to enable real-time data access and enhanced reporting capabilities, resulting in a 75% reduction in manual data input time and empowering decision-makers with actionable insights.
- Developed unit tests and implemented automated testing workflows with GitHub Actions, ensuring consistent code quality and reducing regression risks by targeting 75% code coverage.

- Consulted directly with clients to gather requirements, architecting custom full-stack Python and Django solutions to meet their specific needs.
- Partnered with business stakeholders to translate complex business needs into actionable technical requirements, designing and implementing solutions to address pain points and supported the organization's growth objectives.
- Executed responsive design techniques leveraging React, ensuring cross-platform compatibility and a consistent user experience across devices.

Application Developer Apprentice

June 2020–July 2021

Simmons Foods Inc. / Siloam Springs Arkansas

- Developed and deployed a comprehensive full-stack Django/Python SQL platform, catalyzing a 50% optimization in operational efficiency and mitigating redundant workflows for a high performance multidisciplinary team.
- Leveraged Terraform, AWS, and GitHub Actions to engineer a robust, automated CI/CD infrastructure, ensuring seamless continuous integration and delivery for mission-critical production environments.
- Contributed to the design and development of three separate software solutions, neutralizing systemic bottlenecks and automating manual processes to drive significant value across enterprise business units.

Technical Support Specialist

September 2015–June 2020

Simmons Foods Inc. / Siloam Springs Arkansas

- Delivered high impact and day to day Tier 1 and Tier 2 technical support for a diverse enterprise-wide stakeholder base, leveraging exceptional communication to diagnose and resolve complex technical challenges.
- Oversaw ESXi server infrastructure and multiple Windows Server virtual machines providing critical services such as DNS and Domain Controllers.
- Led the strategic implementation of Windows Deployment Services (WDS) across the organization, successfully standardizing and automating Windows 10 provisioning for both new hardware and legacy system upgrades.
- Engineered custom .Net C# WinForms applications alongside robust PowerShell and Python scripting solutions to automate high frequency workflows, significantly driving operational efficiency and optimizing service-level agreement (SLA) performance.
- Executed physical-layer network installations and infrastructure routing for industrial Programmable Logic Controllers (PLCS) directly on the plant floor, ensuring reliable connectivity for production-critical automation systems.

CERTIFICATIONS

6.00.1x: Introduction to Computer Science and Programming Using Python

MITx, 2021

- Successfully applied Python data structures and algorithms to design and implement solutions for a variety of programming challenges, demonstrating a solid understanding of computational thinking principles.

QA Software Developer

Arkansas Center for Data Sciences (Apprenticely), 2021

- Certified in quality assurance and unit-test driven development, demonstrating expertise in best practices and methodologies to ensure software quality and reliability.

SKILLS

Languages: Bash, C++, C#, CSS, Dart, Groovy, Java, JavaScript, Python, SQL

Frameworks & APIs: Django, Flutter, Java Spring Boot, RESTful API

DevOps & Cloud: Ansible, AWS, Celery, Concord, Docker, Docker-Compose, Jenkins, K3s, RabbitMQ, Redis, Terraform

Databases: InfluxDB, PostgreSQL, MySQL

Infrastructure & OS: ESXI, Proxmox, VMWare, Windows Server, Linux, Red-Hat, Debian, Ubuntu, Windows

Tools & Methodologies: Agile, Lean, DevOps, Scrum, Test Driven Development, Git, JetBrains, Visual Studio, DBeaver, Postman
